Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (vf), and initial velocity (vi). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...

Most flares are made by hand or power tools that swage the tube end over a split die. The standard flare angle is 37 degrees from the centerline. For best results, heavy wall tubing should be cut, deburred, and flared and bent using power equipment. For information on sealing technology, or how to prevent leakage of hydraulic fluid,
