Mark® Vi to Mark Vie Migration

The Mark Vie system makes use of this flexible, high-speed, low-cost communications at the lowest level of control system architecture as a replacement for rack-based control. The I/O can be distributed or centralized, and both primary and safety control can exist on one network while remaining functionally independent.

Mark Vie Control System | GE Power

In a Mark Vie control system, IONET provides communication between the main processor(s) in the controller(s) and the local processors in the I/O packs that are located on the I/O modules. This communication architecture is a star configuration with the network switch(s) in the middle.

GE MARK VIE INSTRUCTION MANUAL Pdf Download | ManualsLib

Mark Vie ICS software was developed specifically for power generation applications. Implementing a modular architecture, Mark Vie ICS allows for a mission-specific turbine control within the same environment as an open plant process control. The system can scale across applications ranging from turbine to plant-level control and protection.
