gas—can only be used once. Together, they are the foundation that ensures our survival and well-being, and the basis of all economic activity.

### **Natural Capital: Valuing the Planet by Dieter Helm**

Helm argues for a basic principle of conserving natural capital - ecosystem services and other renewable resources, and non-renewable resources - from generation to generation. His basic proposal is that the total stock of natural capital should be preserved. This allows some degree of substitution and policy flexibility.

...

The second question is whether this 'natural capital eureka moment' in the corporate world might cloud a wider and equally important issue, viz, the measurement, valuation, reporting, and even the notion of 'success' in the corporate world leaves a lot to be desired. Redefining success is a central concern for the B Team, for IIRC, the International Integrated Reporting Council, and others.

### **Valuing Natural Capital: What Next and Why? | HuffPost**

We treat both natural resources and the biosphere's capacity to absorb our waste as if they were worth nothing. The obvious answer is to place a financial value on what used to be called nature, but has now been rebranded natural capital. There are some magnificent examples of how this could, in principle, spare us from perverse decisions.
