Piecewise functions (or piece-wise functions) are just what they are named: pieces of different functions (sub-functions) all on one graph. The easiest way to think of them is if you drew more than one function on a graph, and you just erased parts of the functions where they aren't supposed to be (along the x 's); they are defined differently for different intervals of x .

A piecewise function is a function built from pieces of different functions over different intervals. For example, we can make a piecewise function $f(x)$ where $f(x) = -9$ when $-9 < x \leq -5$, $f(x) = 6$ when $-5 < x \leq -1$, and $f(x) = -7$ when $-1 < x \leq 9$.
