Probability By Jim Pitman Solutions Manual [d47eq9z72yn2]

Because you have all possible ordered pairs of cards. any probability statement concerning the first card by itself must also be true for the second card by itself, 4) $P(\text{both aces}) = \frac{1}{13} \cdot \frac{1}{12} = \frac{1}{156}$
 $P(\text{at least one ace}) = P(\text{first card ace}) + P(\text{second card ace}) - P(\text{both cards aces}) = \frac{1}{13} + \frac{1}{12} - \frac{1}{156} = \frac{12}{156} + \frac{13}{156} - \frac{1}{156} = \frac{24}{156} = \frac{2}{13}$

pitman solution for exercise 132 in pitman question a the event.

Jim Pitman Probability Solutions Manual

Pitman's book takes a step-by-step approach that builds on prior sections so you don't jump into topics like expectation and distributions without adequate preparation. Unlike Casella and Berger, Pitman's book has a well-organized appendix so you can check other sections of the book for more background when needed.
